Full-Stack Software Engineer with experience building and operating production B2B, e-commerce, and SaaS applications across Next.js, TypeScript, Java, C#, and Python. Experienced in end-to-end product development, system architecture, API integrations, and engineering leadership, including leading a nine-person development and support team. Strong background bridging software engineering, product design, and UI/UX to take products from concept through production.

Skills and Tools

Languages: TypeScript, JavaScript, C#, Java, Python, SQL, Dart

Frontend: React, Next.js, Vue.js, Flutter, Tailwind CSS

Backend: Spring Boot, ASP.NET, REST APIs, Microservices Architecture

Data: PostgreSQL/MySQL, Supabase, Firebase, Dataverse

Cloud & DevOps: Azure, Vercel, Cloudflare, CI/CD, Git

Design: Figma, UI/UX, Prototyping, Design Systems

AI: OpenAI API, Anthropic/Claude API

Professional Experience

Full-Stack E-Commerce Developer – Legends Global – September 2025 to Present

- Develop and support a multi-tenant B2B e-commerce platform serving five enterprise clients and 100+ storefronts across a Next.js frontend and Java microservices backend.
- Assumed day-to-day leadership of the nine-person Core Commerce development and support team following a management transition, coordinating development priorities, production support, issue resolution, and feature delivery.
- Meet directly with clients on a weekly basis to gather requirements, address technical and business needs, and translate client priorities into actionable development work for the engineering team.
- Reduced the active engineering backlog from 100+ items to approximately 10 by restructuring ticket prioritization and focusing development efforts on high-impact issues and technical improvements.

Founder & Lead Software Engineer (Part-Time) – Icarian Software Solutions LLC – July 2025 to Present

- Founded and currently lead a software consultancy focused on rapid prototyping and product development, independently researching, scoping, architecting, and delivering applications across web and mobile platforms.
- Manage the full Software Development Life Cycle (SDLC), taking products from initial research and user experience design through development, testing, deployment, and user feedback.
- Designed and deployed a production website for nonprofit client [The Gender Violence Project](#), delivering a customer-facing platform from initial requirements and design through production launch.
- Build scalable applications using technologies including Next.js, Vue.js, Flutter, Supabase, and Tailwind CSS while integrating third-party services such as Stripe, Supabase Auth, OpenAI, and Firebase.

Software Developer (Contract) – Vortex Computation – September 2025 to March 2026

- Designed and delivered custom software solutions for business clients, owning projects across the full development lifecycle from requirements gathering and design through development, testing, and deployment.
- Independently designed and deployed a scheduling application using Power Apps, Microsoft Dataverse, and Power BI, replacing an Excel-based workflow with a centralized drag-and-drop calendar that simplified day-to-day scheduling for the client.
- Collaborated within a three-person engineering team to design and deliver a client-facing Next.js application, contributing throughout the complete SDLC from design to production deployment.

Founding Engineer (Part-Time) – ClarityLA – September 2024 to June 2025

- Worked closely with the founding team to architect and deliver the first version of an AI-powered EdTech platform, translating high-level educational goals into functional product experiences.
- Led early product strategy and UX design while developing the majority of the full-stack application using Next.js, Python, Supabase, and Vercel.
- Built and deployed production-ready features across the stack while establishing foundational technical standards and development workflows for scalability and future growth.

Software Developer – Reynolds and Reynolds – August 2024 to May 2025

- Contributed to the development of Auto Vision, a web application for car dealerships to view, track, and sell vehicles, using Vue.js for frontend development and C# for backend development.
- Developed full-stack features and API integrations while participating in code reviews, debugging, and continuous application improvements within an Agile development team.
- Recognized as Team MVP for leading the UX design and integration of an AI-powered chatbot and messaging system while also developing interactive product showcase features.

UI/UX Developer (Contract) – ClearStack AI – May 2024 to December 2024

- Worked directly with clients to gather requirements and translate business needs into user interfaces, creating and refining designs and prototypes in Figma.
- Developed frontend features for full-stack applications using Vue.js while contributing to the organization's CI/CD pipeline and broader development process.
- Collaborated with engineers to research emerging AI and LLM technologies and identify opportunities to improve application experiences through AI integration.
- Designed and developed a production landing page for ClearStack AI using Figma and Vue.js.

Software Development Intern – Kinective (Formerly CFM) – October 2022 to August 2023

- Developed software using Vue.js and Java Spring Boot to support communication between banking hardware, backend systems, and frontend teller applications.
- Built an internal automated QA tool using Java and Vue.js that accelerated the team's testing process.
- Collaborated with a four-person design and development team to establish a reusable design system in Figma.

Education

Grand Canyon University - Bachelor of Science in Software Development, Minor in Web Design

- Dean's List, President's Scholarship, Resident Assistant, Summa Cume Laude, Honors

Hill College - Associate of Arts in Computer Science

- President's List, Baseball Scholarship, Honors
